

LedgerFlow

Embedded Credit Infrastructure for SME Marketplaces

The Problem: SMEs Are Locked Out of Fast Credit

Small and medium enterprises selling on B2B marketplaces routinely wait weeks for working-capital loans because traditional banks rely on outdated, manual underwriting. Marketplaces lose transaction volume every time a seller cannot finance inventory in time, and most platforms have no way to offer credit without becoming a licensed lender themselves.

Our Solution: Underwriting-as-a-Service

LedgerFlow provides a drop-in API that lets B2B marketplaces and payment platforms embed real-time SME credit scoring and instant working-capital offers directly at checkout. We handle underwriting, risk-based pricing, and loan servicing so our marketplace partners can offer credit without ever holding lending risk on their own balance sheet (B2B2B model).

Technology Advantage

- Proprietary risk model trained on 40+ alternative data signals (transaction history, cash-flow patterns, supplier reviews), refreshed daily via streaming pipelines.
- Sub-200ms scoring latency at checkout, built on a Go microservice architecture with a feature store for real-time signal lookups.
- Continuous model monitoring with automated drift detection to keep default-rate predictions accurate as marketplace behavior shifts.

Proposal for Meridian Capital

We are seeking a **\$2,000,000 Series A** investment to expand our underwriting model to three new verticals and scale integrations with marketplace partners.

This opportunity aligns closely with Meridian Capital's thesis of backing embedded-finance infrastructure that unlocks capital access for underserved SMEs through scalable, API-first products.
